

## Cleanroom Inner Garments

Last Updated Tuesday, 16 December 2008

Inner Garments EUROTEx(TM) inner suits form part of the total clothing regime. Manufactured in low linting, breathing fabrics they significantly reduce particle challenge to the outer suits as well as eliminating 'street' influence from the cleanroom.

OvertopRounded or v-neck  
Short or long sleeves  
Raglan sleeves

Sizes:

Extra Small | Small | Medium | Large | Extra Large | Extra Extra Large

TrousersElasticated or pyjama cord waist  
Studded or knitted ankles

Sizes: Small | Medium | Large

Inner garments are manufactured in a wide range of comfortable, lightweight, breathing fabrics with excellent MVTR (moisture vapour transmission rate) specifications.

EUROTEx(TM) inner suits can be worn either as a 'factory suit' or as inner garments to supplement the barrier to particle emission.

Factory wear assists QC in largely factoring out 'street' influence and enables easy donning of whichever garment regime the operative may require to meet during the working day.
