

## Coveralls & Boilersuits

Last Updated Thursday, 02 September 2010

Food Hygiene Boilersuits (Coveralls) Specification Sheet: [Hygiene Coverall 5700 \(199.09 kB\) \(Download\)](#) Fabrics Options: [List of Fabrics \(Download\)](#)

Coveralls or Boilersuits are a one piece full body protection garment. The features/purpose of this garment is to allow the operator to fasten the front opening right up to the neck. As an extra feature the 'normal' turn back collar has been replaced with a 'Mandarin' (or Chinese) stand up collar with rounded corners that do not protrude into the wearers neck. Sleeve ends are offered closed by a variety of methods - Tunnel Elastication in the hem, Helanca (knitted) cuffing, or Press stud adjustable fastenings. Pockets, and access to inner clothing is the single biggest issue that operators/wearers have when working in a hygiene area. With our special top pocket 'Hygiene' design, an operator can freely access a top internal pocket without actually opening the front of the garment and compromising the manufacturing process. The example garment specification sheet shown above is just one of a variety of styles created from our standard design template. Customers can request any design/variation they wish, and we are happy to draft a design specification, or to recommend a particular design suitable for a particular 'end-use'. "Food Hygiene Garments should be Thermally Disinfected during the industrial laundering process"
